

possible interludes of catatonias.

- Tiredness most of the time for about an hour, ~~onset~~ unknown.
- Quick fleeting movements in peripheral vision. Kind of like a light flicker. Other times dark spatchy movement in peripheral vision like a crow or beetle. Occurrence rate usually 1 to 3 times per day/night. Onset unknown but > 1 year ago, when gaze is shifted to identify movement no source, or potential source for its cause present.
- Proclivity to scan environment with no target or object in mind. Typically occurs alongside apathy in a boring situation when someone is giving a presentation or otherwise rambling about frivolous information. Rate - often. Onset - child.
- Recurring return to mirror to look at appearance. Particular attention focused on hair styling. 10+ times a day. Onset > 1 year ago.
- Concern with tooth. Only skewed with ~~left~~ <sup>left</sup> side of jaw to preserve right side of teeth. Occurred as child and persisted after getting braces.
